

EVACPAK

EMERGENCIES HAPPEN...
ARE YOU **PREPARED?**

BE PREPARED FOR THE UNEXPECTED

Every building owner, building manager & employer has a legal obligation to safeguard occupants in the event of an emergency situation.

Fires, gas leaks, bomb threats and other potentially life threatening situations can occur at any time. A well planned emergency response is essential to protect building occupants, minimising the potential for injury, death and financial loss.

Prevent tragedy and minimise financial loss.

Building regulations are becoming tougher and financial penalties are becoming more severe for non-compliance. In addition, health & safety legislation specifies clear requirements for emergency evacuation procedures to protect employees. With so much at stake, you can't ignore your responsibilities for emergency planning.

You need to have a controlled, disciplined approach to an emergency incident including procedures, training, evacuation plans & signage. Control & coordination is the key to a successful emergency response.

What are the benefits?

A tailored emergency response program will ensure you:

- Foster a safe working environment and protect employees.
- Satisfy legislative requirements.
- Minimise liability of managers, building owners and other responsible parties.
- Reduce risk exposure to personal injury claims and property damage.

The EVACPAK – a simple, effective emergency response program

The EVACPAK is a joint initiative between RiskLogic and Aqua Fire Protection. It is a combination of materials and services that are tailored to suit your particular emergency response needs. We work together with you to develop the required emergency response and evacuation procedures, control & coordination structure, warden training, evacuation plans & signage.

The EVACPAK is a practical, cost effective way to comply with best practice Emergency Response in accordance with Australian Standard 3745 and is ideal for any sized residential, commercial or industrial premises.

RiskLogic and Aqua Fire Protection are members of the Fire Protection Association Australia.

EVACPAK Standard

Designed for the majority of buildings and workplaces it ensures you comply with Australian Standard 3745 including:

- Setup of emergency planning committee.
- Establishment of warden teams.
- Authorised warden directory.
- Emergency procedures.
- Evacuation plan/s.
- Emergency signage for premises.
- Emergency response training for wardens.
- Communication material.
- Evacuation drill.

EVACPAK Basic

Introductory level emergency planning system tailored for those organisations and sites with "bare minimum" needs.

EVACPAK Professional

Designed for higher risk or specialised industries, complex requirements or larger premises.

EVACPAK Maintenance

Designed to ensure you fulfil your ongoing emergency planning requirements.
